Abstract

WIRELESS COMMUNICATION UNIT AND A METHOD OF OPERATION THEREOF

A wireless communication unit ~~(100)~~ for use in a digital radio communication system comprising means for signal transmission ~~(102, 104, 106)~~, means for signal reception ~~(108, 104, 106)~~, a vocoder ~~(132)~~, a digital-to-analog converter ~~(134)~~ and a microprocessor ~~(110)~~. The wireless communication unit further comprises a means for storing messages ~~(124)~~. The microprocessor ~~(110)~~, when activated, is adapted to stop playing a message while still recording said message in said means for storing messages ~~(124)~~ and to start replaying said message stored in said means for storing messages ~~(124)~~ from a beginning of said message.
